

# Designing Responsible AI

## Spartacus Dental AI

By **Samira Gevara** · Course: ITAI 1371

# What is Spartacus Dental AI?

## The Problem

Dental offices lose significant time and resources every day to manual insurance workflows – searching policy manuals, calling insurance companies, verifying patient benefits, and explaining coverage decisions. This slows patient care and increases administrative burden across the entire practice.

## My Solution

Spartacus Dental AI is an intelligent assistant purpose-built for dental staff. It quickly determines insurance coverage for dental procedures and delivers clear, plain-language explanations for every recommendation – turning a frustrating bottleneck into a seamless workflow.

# Product Overview

## Purpose

Deliver fast, accurate insurance benefit information at the point of care – reducing wait times and eliminating guesswork for clinical and administrative staff.

## Target Users

- Dental clinics & dental groups
- Dentists & specialty providers
- Insurance coordinators
- Front desk staff
- Patients seeking coverage clarity

## Data Sources

- Insurance policy documents
- CDT dental procedure codes
- Historical claim information
- Benefit schedules
- Patient insurance data (with permission)

# How It Works

From patient arrival to a clear coverage answer, Spartacus Dental AI automates the most time-consuming steps in insurance verification – providing staff with an actionable result in seconds rather than minutes on hold.

AI ETHICIST PERSPECTIVE

# Ethical Questions: Fairness & Bias

## The Risk

Could the AI favor larger insurance companies simply because more training data is available for them? Smaller or regional insurers may be underrepresented, leading to systematically less accurate – or less favorable – results for patients covered under those plans.

## Our Approach

- Curate diverse training data across insurers of all sizes
- Conduct regular, structured bias testing
- Perform continuous model evaluation and correction
- Document bias audit results transparently

# Ethical Questions: Privacy & Security

Spartacus Dental AI necessarily operates with **Protected Health Information (PHI)** – some of the most sensitive data a patient can share. Responsible handling is not optional; it is foundational to the system's integrity and legal operation.

## HIPAA Compliance

All data handling meets or exceeds federal HIPAA requirements for healthcare information privacy and security.

## Encryption

Patient data is encrypted both at rest and in transit using industry-standard protocols.

## Role-Based Access

Only authorized staff with a legitimate clinical or administrative need can access patient information.

## Minimal Collection

The system collects only the data strictly necessary to generate a coverage determination – nothing more.

# Ethical Questions: Transparency

Patients and staff deserve to understand *why* the AI made a recommendation – not just what it decided. Opaque outputs erode trust and make it impossible to catch errors. Spartacus Dental AI is built to explain itself in plain, human-readable language.

## Without Transparency

"Coverage denied."

A terse denial with no context leaves staff unable to assist patients and patients feeling dismissed.

## With Spartacus Dental AI

"Your insurance plan requires a 12-month waiting period for crowns. Based on your enrollment date, this waiting period ends on March 15, 2026."

Clear explanations empower staff to counsel patients with confidence and accuracy.

AI ETHICIST PERSPECTIVE

# Ethical Questions: Accountability

## AI assists. Humans decide.

Spartacus Dental AI is a decision-support tool, not a decision-making authority. Every recommendation it produces is an input to a clinical or administrative professional's judgment – not a final ruling. The dental team retains full responsibility for the decisions made in their practice, and the AI is designed to support – never replace – that professional accountability.

The AI provides a confidence level with every output so staff can calibrate how much weight to place on the recommendation and when to seek additional verification.

# Building Fair AI: Under the Hood

1

## Data Collection

Source data from insurance manuals, CDT procedure codes, historical claims, and benefit schedules – spanning multiple insurers and plan types.

2

## Data Preparation

Remove duplicate records, verify that policy versions are current, and standardize procedure codes before any training begins.

3

## Model Training

Train for high accuracy, fair recommendations, and explainable outputs – using balanced datasets drawn from a wide range of insurance providers.

4

## Continuous Retraining

Insurance policies change regularly. The model must be retrained frequently to stay accurate – this is not a one-time build but an ongoing commitment.

# Bringing Spartacus Dental AI to Market

## Target Customers

- Small independent dental practices
- Large multi-location dental groups
- Specialty clinics (ortho, oral surgery, perio)

## Key Benefits

- Faster insurance verification
- Reduced administrative workload
- Improved patient experience
- Fewer claim errors and denials

## Go-to-Market Challenges

Success depends not only on technical performance but equally on user trust and ease of adoption. Three critical challenges must be addressed:

### → Earning Trust

Clinical staff must be confident the AI is accurate before they rely on it in patient interactions.

### → Keeping Data Current

Insurance information changes constantly – keeping the knowledge base up to date is an operational commitment.

### → Software Integration

The AI must fit smoothly into existing dental practice management and billing systems.

# Protecting the Patient

Patients interacting with AI-assisted healthcare systems have fundamental rights. Spartacus Dental AI is designed from the ground up to honor and protect those rights.

## Patient Rights

- Know **what information** is collected about them
- Understand **why** it is collected and how it is used
- Be assured of **how** their data is protected
- Receive clear explanations of **how recommendations** are generated

## Built-In Consumer Protections

- Human review is always available upon request
  - Explanations are written in plain, accessible language
  - Patients can correct their personal information
  - Manual verification is offered as an alternative at any time
-  Potential concerns such as incorrect estimates, data breaches, or overreliance on AI are mitigated through layered technical and procedural safeguards.

# Meeting Regulatory Standards

Healthcare AI must operate within a clear, enforceable regulatory framework. Spartacus Dental AI is built to meet – and anticipate – these standards. Organizations remain responsible for decisions made with AI assistance, even when AI is deeply involved in the process.

**HIPAA Compliance**

**Security Audits**

**Bias Testing**

**Independent Validation**

**Training Data Docs**

**Explainable AI**

# Ethical Summary

Responsible AI requires deliberate design decisions across every dimension – from how data is collected to how decisions are communicated. The table below summarizes how Spartacus Dental AI addresses each core ethical principle.

| Principle       | Spartacus Dental AI Response                                                                                          |
|-----------------|-----------------------------------------------------------------------------------------------------------------------|
| Privacy         | Encrypt all patient data and maintain full HIPAA compliance at every layer of the system.                             |
| Fairness        | Train on diverse insurance providers of all sizes and conduct regular bias audits to ensure equitable outcomes.       |
| Transparency    | Provide a plain-language explanation for every recommendation so staff and patients understand the reasoning.         |
| Accountability  | AI assists and informs – licensed professionals retain full authority and responsibility for final decisions.         |
| Security        | Protect patient records with strong cybersecurity measures including encryption, access controls, and regular audits. |
| Societal Impact | Reduce administrative burden on dental staff while improving patient access to clear, accurate insurance information. |

# Future Improvements

Spartacus Dental AI is designed with a roadmap for responsible growth. Each planned enhancement expands the system's value while maintaining its commitment to accuracy, privacy, and transparency.

## Real-Time Insurance API

Connect directly to insurer systems for live eligibility and benefit data — eliminating manual updates.

## Patient Mobile App

Empower patients to check their own coverage estimates before appointments, reducing surprise bills.

## Multi-Language Support

Serve diverse patient populations by delivering explanations in their preferred language.

## EHR Integration

Connect with electronic health record systems so coverage information flows seamlessly into the clinical workflow.

## AI-Powered Appeals

Assist staff in drafting and submitting insurance appeals with AI-generated supporting documentation.

## Predictive Cost Estimates

Provide patients with projected out-of-pocket costs for treatment plans before care begins.

# Conclusion

Spartacus Dental AI demonstrates how artificial intelligence can solve a real-world healthcare challenge while keeping responsible development at the center of every design decision.

## Beyond Accuracy

Building effective AI means more than achieving high accuracy – it requires protecting patient privacy, reducing bias, and providing transparent, human-readable explanations.

## Human Oversight

Maintaining meaningful human oversight and complying with healthcare regulations are non-negotiable elements of any trustworthy clinical AI system.

## Multi-Stakeholder Design

By integrating the perspectives of an ethicist, data scientist, product manager, consumer advocate, and government regulator, we create AI that is both innovative and trustworthy.

Responsible AI is not a constraint on innovation – it is the foundation that makes sustainable innovation possible.
